

The Garrett Liners Pool Plotter™

Created Exclusively For Your PC or Laptop

At Garrett we created the *AB Pool Plotter* exclusively for the PC based enthusiast. Now, you can see the A-B measurements for a pool before you leave the job site, and have the computer calculate and plot the points as they are entered in larger detail. Any problem points will be instantly apparent, allowing you to make corrections immediately. Before you leave the customer's backyard, you will know that your measurements are accurate and consistent. Plus, there is no need to purchase, Garrett offers this program for **FREE!** *The A-B Pool Plotter* can be installed and run from your own laptop or personal computer.

Some of the *A-B Pool Plotter*™ features include:

- ✓ Can be used for measuring both liners and covers.
- ✓ All data is visible on your monitor and drawn in large scale graphics, not squeezed onto a small PDA display.
- ✓ All changes are reflected instantly.
- ✓ Supports measuring multiple and independent sections. No longer is the liner hopper or rock waterfall part of one massive list of A-B measurements.
- ✓ Supports two different measuring methods:
 - From the A-B points.
 - From two existing points on the pool.
- ✓ Double check your measurements by entering cross-pool diagonals.
- ✓ Print all your measurements for archiving or for faxing.
- ✓ For quicker service, you can e-mail the pool measurements to us with just a few mouse clicks (internet connection required)
